

Aleksandre Giorgadze

Junior Python Developer — Automation & AI-Augmented Internal Tools

Tbilisi, Georgia · giorgadzealexandree@gmail.com · acyb3rn.github.io · github.com/acyb3rn · linkedin.com/in/aleksandrejiorgadze

ABOUT

Python developer specializing in workflow automation and AI-augmented internal tools. I find manual processes and remove them with scripting and API integrations, and I document what I build. CS student at Ilia State University, physics before that; currently at Flat Rock Technology, building the automation I was hired to do by hand.

PROJECTS

Product Field Analyzer — Python, OpenAI Vision, Flask, Tkinter github.com/acyb3rn/product-field-analyzer
Fills missing marketplace listing attributes by reading product photos. Every field carries a confidence score, results are triaged by match or mismatch against expected values, and retry handling means one bad image cannot kill a batch. Ships as a CLI, a Flask app and a desktop review app where a person approves before export. *Built at Flat Rock.*

Amazon Size Rule Extractor — Python, JSON Schema github.com/acyb3rn/amazon-size-rule-extractor
Walks Amazon's nested if/then/else validation schemas (roughly 450 KB per product type) and flattens them into a filterable Excel workbook, one sheet per product type. *Built at Flat Rock Technology.*

Argus Course Downloader — Python, Playwright, cron github.com/acyb3rn/argus
Logs into a university portal every morning, detects new course materials and downloads them unattended. Reverse-engineered the portal's internal REST API from network traffic. Ran daily through a full semester with zero missed days.

Aware — JavaScript, Chrome Extensions API getaware.app
Chrome extension for intentional browsing: intercepts distracting sites and prompts a conscious decision before entry. My own product, idea to launch.

EXPERIENCE

Portex Georgia — Web Developer *Tbilisi · Jul 2026 – Present*
Sole developer of the web presence for an international freight forwarder (portexgeo.com): bilingual (EN/KA) marketing site plus an authenticated customer portal where clients track container status, route and ETA. React, TypeScript, Tailwind, Supabase/Postgres.

Flat Rock Technology — Account Strategy Associate *Tbilisi · Dec 2025 – Present*
Built the internal automation behind marketplace-data workflows: a JSON Schema parser, an AI attribute detector, and Excel report automation. Manage and resolve listing errors across Amazon and eBay at scale, tracing failures back to the validation rules that cause them. Identified each automation opportunity independently and shipped the tool to close it.

Flat Rock Technology — Data Analyst *Tbilisi · Jun 2025 – Dec 2025*
Data analysis across Amazon, eBay, Google and Bing marketplace datasets; produced recurring and ad hoc client reports. Promoted to Account Strategy Associate after six months.

Scandiweb — Data Research Analyst *Tbilisi · Jul 2023 – May 2024*
Qualified thousands of companies against ICP criteria in Salesforce CRM; manual QA testing of client websites alongside developers.

Evolution — Schedule Specialist *Tbilisi · Feb 2022 – Jun 2023*

EDUCATION

Ilia State University — BSc Computer Science *Tbilisi · 2025 – Present*
Free University of Tbilisi — Physics *2020 – 2025 (transferred to CS)*

SKILLS & LANGUAGES

Languages & tools: Python (pandas, openpyxl, Playwright, Flask, Tkinter), SQL, JavaScript/TypeScript, React, HTML/CSS, Git, Linux, C

Learning: FastAPI, deeper SQL, agentic AI · **Spoken:** Georgian (native), English (C1), Russian (A1)
