

Aleksandre Giorgadze

Junior Python Developer — Automation & AI-Augmented Internal Tools

Tbilisi, Georgia · giorgadzealexandree@gmail.com · acyb3rn.github.io · github.com/acyb3rn · linkedin.com/in/aleksandregiorgadze

ABOUT

Python developer specializing in workflow automation and AI-augmented internal tools. I find manual processes and remove them: a browser automation that ran unattended every morning for a full semester, a JSON Schema parser that turns Amazon's validation rules into readable Excel reports, and an AI tool that fills missing product attributes from photos. CS student at Ilia State University, physics before that; currently at Flat Rock Technology, building the automation I was hired to do by hand.

PROJECTS

Product Field Analyzer — Python, OpenAI Vision, Flask, Tkinter

github.com/acyb3rn/product-field-analyzer

Fills missing marketplace listing attributes by reading product photos. Confidence-scored output with match/mismatch triage, constrained JSON responses, and retry handling so one bad image cannot kill a batch. Ships as a CLI, a Flask app, and a desktop review app where a person approves before export. *Built at Flat Rock Technology.*

Amazon Size Rule Extractor — Python, JSON Schema, openpyxl

github.com/acyb3rn/amazon-size-rule-extractor

Walks Amazon's nested if/then/else validation schemas (roughly 450 KB per product type) and flattens them into a filterable Excel workbook, one sheet per product type. Turned an afternoon of manual schema reading into a filter. *Built at Flat Rock Technology.*

Argus Course Downloader — Python, Playwright, cron

github.com/acyb3rn/argus

Logs into a university portal every morning, detects new course materials and downloads them unattended. Reverse-engineered the portal's internal REST API (token refresh, materials listing, signed S3 links) from network traffic. Ran daily through a full semester with zero missed days.

Aware — JavaScript, Chrome Extensions API

getaware.app

Chrome extension for intentional browsing: intercepts distracting sites and prompts a conscious decision before entry. My own product, from idea to launch; being prepared for release as a subscription.

EXPERIENCE

Portex Georgia — Web Developer

Tbilisi · Jul 2026 – Present

Sole developer of the web presence for an international freight forwarder (portexgeo.com): bilingual (EN/KA) marketing site plus an authenticated customer portal where clients track container status, route and ETA. React, TypeScript, Tailwind, Supabase/Postgres, with SEO and structured data built in.

Flat Rock Technology — Account Strategy Associate

Tbilisi · Dec 2025 – Present

Built the internal automation behind marketplace-data workflows: a JSON Schema parser, an AI attribute detector, and Excel report automation. Manage and resolve listing errors across Amazon and eBay at scale, tracing failures back to the validation rules that cause them. Identified each automation opportunity independently and shipped the tool to close it.

Flat Rock Technology — Data Analyst

Tbilisi · Jun 2025 – Dec 2025

Collected and analyzed large datasets across Amazon, eBay, Google, and Bing; produced recurring and ad hoc client reports.

Scandiweb — Data Research Analyst

Tbilisi · Jul 2023 – May 2024

Researched and qualified thousands of companies against ICP criteria in Salesforce CRM; performed manual QA testing of client websites alongside developers.

Evolution — Schedule Specialist

Tbilisi · Feb 2022 – Jun 2023

Coordinated complex multi-team staff scheduling in a 24/7 operation.

EDUCATION

Ilia State University — BSc Computer Science

Tbilisi · 2025 – Present

Free University of Tbilisi — Physics

2020 – 2025 (transferred to CS)

SKILLS & LANGUAGES

Languages & tools: Python (pandas, openpyxl, Playwright, Flask, Tkinter), SQL, JavaScript/TypeScript, React, HTML/CSS, Git, Linux, C

Currently learning: FastAPI, deeper SQL, agentic AI workflows · **Spoken:** Georgian (native), English (C1), Russian (A1)
